

Lab Task 5: Understanding Single-cast and Multi-cast Delegates

Questions:

1. Define a Delegate:

- Create a delegate `public delegate void MessageHandler();`

2. Create Two Methods:

- Define two methods `ShowWelcome()` and `ShowGoodbye()` that print welcome and goodbye messages.

3. Single-cast Delegate:

- Create a delegate instance pointing only to `ShowWelcome()`.
- Invoke the delegate and observe the result.

4. Multi-cast Delegate:

- Add `ShowGoodbye()` to the same delegate using `+=`.
- Invoke the delegate again and observe both messages are displayed.

5. Remove a Method:

- Use `-=` to remove `ShowWelcome()` from the delegate.
- Invoke the delegate and observe only `ShowGoodbye()` is called.
