

Lab Task 4: Website and Subscriber Notification System (Delegates & Events)

1. Create a Website class:
 - Define a delegate ContentPublishedHandler that takes a string parameter.
 - Define an event OnContentPublished using that delegate.
 - Implement a method PublishContent(string title) that triggers the event.
2. Create a Subscriber class:
 - Add a Name property via constructor.
 - Implement a method Notify(string title) that prints a notification message.
3. In the Main method:
 - Create a Website object.
 - Create two or more Subscriber objects.
 - Subscribe each to the website's OnContentPublished event.
 - Publish at least two pieces of content.
 - Observe the notifications printed by subscribers.
